

ANTI-WRINKLE TREATMENT

What is Botulinum Toxin?

Botulinum toxin is a safe to use bacterial toxin which, when injected into the facial muscles in minute quantities relaxes the muscles and effectively improves the appearance of wrinkles that are caused by the movement of these muscles.

Estimated treatment time?

30-40 Minutes (estimated dependant on procedure)

Recovery time

Approx. 20 minutes

Duration

3-4 months (variation amongst individuals)

Risks and complications

The most common side effect of Botulinum Toxin are headache and injection reactions e.g. redness, swelling, irritation, rash, itching, numbness, pain, discomfort, stinging, bruising and bleeding. Normally these reactions are mild, reversible and occur within the first week of treatment. There is also a small possibility of slight drooping of the eyelid, facial asymmetry and visual problems (in the event of temporary eyelid drooping). If you suffer from Herpes Simplex Virus (cold sores) there is a chance this may be activated post-treatment.
